

### 1.Product Introduction

AH503 is a highly sensitive unipolar Hall switch chip designed based on BCDMOS technology. The chip includes temperature compensation, comparator, and output driver. In addition, mechanical stress has little effect on the magnetic parameters of the chip.

The series of chip sensors is suitable for industrial and automotive applications, with an ambient temperature range of  $-40^{\circ}\text{C}$  to  $150^{\circ}\text{C}$  and supply voltage range of 2.7V to 30V. AH503 provides a variety of packages to customers: TO92S, SOT23 (small), SOT23. All packages are RoHS compliant. The product has passed AEC-Q100 certification.

### 2.Function

- AEC-Q100 Grade 0 Automotive Level Certification
- Operating Vcc Range:2.7V~30V
- ESD:  $\pm 12\text{kV}$
- high mechanical stress suppression ability
- Temperature range:  $-40^{\circ}\text{C}\sim 150^{\circ}\text{C}$
- The decrease of magnetic flux density caused by rising temperature is compensated by the built-in negative temperature coefficient
- Reverse-voltage protection at Vcc pin
- Suitable for automobiles and industries
- Overvoltage protection up to 40V

### 3.Application

- Speed and RPM sensing
- Tachometer sensor、Flow-rate sensing
- DC motor, motor and fan control, robotics control
- Proximity sensor、Position sensor
- Seat belt buckles、hood/trunk/door latches
- Sunroof/convertible top/tailgate
- liftgate activation
- Brake/clutch pedals
- Electric power steering(EPS)
- Transmission shifting
- Wiper motor

### 7. Absolute Maximum Ratings

Absolute maximum ratings are limited values to be applied chips, and beyond which the absolute maximum rating may be damage chips. Although the functionality is not necessarily damaged, exposure to absolute maximum rating conditions for an extended period of time may affect device reliability

### 8. Recommended operating conditions

When the operation of the chip exceeds the range described in the recommended operating conditions, it may lead to abnormal chip operation and may reduce reliability and service life

### 12. Typical Application Circuit

Typical Application Circuit 1

For applications with interference or radiation interference on the supply line, a series resistor  $R_V$  and two capacitors  $C_P$  and  $C_L$  are placed near the sensor (typical application circuit 2). For example:  $R_V=100\ \Omega$ ,  $C_P=10\text{nF}$  and  $C_L=4.7\text{nF}$ .  $R_L$  is an open drain pull-up resistor, which must be placed near the input end of the host controller to enable wire break detection.

### 15.Note

- Hall chips are sensitive devices, and electrostatic protection measures should be taken during use, installation, and storage.
- During installation and use, mechanical stress applied to the device casing and leads should be minimized as much as possible.
- It is recommended that the welding temperature should not exceed 350 °C and the duration should not exceed 5 seconds.
- To ensure the safety and stability of Hall chips, it is not recommended to use them beyond the parameter range for a long time.
