

1.Product Introduction

AH542 is a Hall switch chip designed based on BCDMOS technology. The sensors includes hall devices with temperature compensation, dynamic offset cancellation amplifiers, comparators, and output stages. The chip outputs current. The comparator compares the actual magnetic flux with a fixed reference value (switching point) to control the current level of the output MOSFET. Active offset compensation can generate magnetic characteristics with specific temperature coefficients under various power supply voltages. In addition, mechanical stress has little effect on magnetic parameters. In addition, mechanical stress has little effect on the magnetic parameters of the chip.

The series of chip sensors is suitable for industrial and automotive applications, with an ambient temperature range of -40 °C to 150 °C and supply voltage range of 3.0V to 30V. AH542 provides a variety of packages to customers: TO92S, SOT23 (small), SOT23. All packages are RoHs compliant. The product has passed AEC-Q100 certification.

2.Function

- AEC-Q100 Grade 0 Automotive Level Certification
- Operating Vcc Range:3.0V~30V
- ESD: ±12kV
- High mechanical stress suppression ability
- Switching points with specific temperature coefficients
- Temperature range: -40°C~150°C
- Reverse-voltage protection at Vcc pin
- Suitable for automobiles and industries

3.Application

- Speed and RPM sensing
- Tachometer sensor、Flow-rate sensing
- DC motor, fan control, robotics control
- Proximity sensor、Position sensor
- Seat belt buckles、hood/trunk/door latches
- Sunroof/convertible top/tailgate
- Liftgate activation
- Brake/clutch pedals
- Electric power steering(EPS)
- Transmission shifting
- Wiper motor

5. Functional Block Diagram

6. Pin information

No.	Name	Functions
1	V _{CC}	Power supply voltage 2.7V~30V
2	GND	Ground wire
3	V _{OUT}	NC (undefined)

T092S

SOT23 (small I) / SOT23-3L

7. Absolute Maximum Ratings

Absolute maximum ratings are limited values to be applied chips, and beyond which the absolute maximum rating may be damage chips. Although the functionality is not necessarily damaged, exposure to absolute maximum rating conditions for an extended period of time may affect device reliability

Symbol	Parameters	Pins	Min	Max	Unit	Test condition
V _{CC}	supply voltage	1	-20	30	V	t<1000h ¹⁾
			-	34	V	t<96h ¹⁾
			-	36	V	t<5min ¹⁾
T _A	operating ambient temperature		-40	170	°C	
T _s	storage temperature		-65	170	°C	-
T _J	maximum junction temperature			165	°C	-

¹⁾No accumulated stress

8. Recommended operating conditions

When the operation of the chip exceeds the range described in the recommended operating conditions, it may lead to abnormal chip operation and may reduce reliability and service life

Symbol	Parameters	Pins	Min	Typ	Max	Unit
V _{CC}	supply voltage	1	3.0	-	30	V
T _A	operating ambient temperature	-	-40	-	150	°C

ESD ratings

9. Electrical Parameters

Test conditions: $V_{CC}=3.0V\sim 30V$, $T_A=-40^{\circ}C\sim 150^{\circ}C$

Symbol	Parameters	Pins	Min	Typ	Max	Unit	Test condition
I_{VCC_LO}	Power supply low current	1	4.0	6.0	8.0	mA	$B > Brp$ ire
I_{VCC_HI}	Power supply high current	1	12	15	18	mA	$B < Bop$
I_{CCR}	reverse current				1	mA	$V_{CC}=-18V$
B_{NOISE}	Effective noise of switching points			1		Gs	Suitable for square wave signals of 1kHz

10. Magnetic Parameters

Part No.	Switch Type	TC (pp m/K)	Bop (Gs)			Brp (Gs)			Bhys (Gs)		
			Min	Typ	Max	Min	Typ	Max	Min	Typ	Max
AH542	Bipolar	0	-	121	-	-	-121	-	-	242	-

11. Magnetic Characteristics

12. Typical Application Circuit

The following figure shows a simple application with a 2-wire sensor. Current consumption can be detected by measuring the voltage on the R_L . In order for the sensor to function properly, the voltage between V_{CC} and GND must be at least V_{CCMIN} . At maximum current consumption of I_{CC_HIMAX} , the maximum R_L can be calculated as:

$$R_{Lmax} = \frac{V_{BATTmin} - V_{CCmin}}{I_{cchimax}}$$

Typical Application Circuit 1

For applications with interference or radiation interference on the power line, it is recommended to place a series resistor R_V and a capacitor C_P near the sensor. In this case, the maximum R_L can be calculated as:

$$R_{Lmax} = \frac{V_{BATTmin} - V_{CCmin}}{I_{cchimax}} - R_V$$

Typical Application Circuit 2

13.Characteristic Performance

$V_{cc}=5V$, Bop and Brp Characteristic Performance

$V_{cc}=5V$, Supply current Characteristic Performance

$V_{cc}=3.0\sim 30V$, Average power supply current (low) Characteristic Performance

$V_{cc}=3.0\sim 30V$, Average power supply current (low) Characteristic Performance

15. Note

- Hall chips are sensitive devices, and electrostatic protection measures should be taken during use, installation, and storage.
- During installation and use, mechanical stress applied to the device casing and leads should be minimized as much as possible.
- It is recommended that the welding temperature should not exceed 350 °C and the duration should not exceed 5 seconds.
- To ensure the safety and stability of Hall chips, it is not recommended to use them beyond the parameter range for a long time.

16. Historical Version

No.	Time	Describe
1	September 6th, 2022	Update Characteristic Performance.
2	December 22th, 2022	Update static voltage output error range
3	February 9th, 2023	Update IC limit of operate temperature and storage temperature
4	April 19th, 2023	Version update to V1.2
